

Change Point Detection of Internet Traffic Anomalies via Singular Values of the Laplacian Matrix

Addie Wisniewski
Saint Louis University

What are internet traffic anomalies?

University of Maryland, Baltimore

Midland University

University of California

University of Hawaii

Ohio Valley University

M.I.T.

University of Colorado

Lincoln College

University of Miami

University of
Washington

Pennsylvania State University

Howard University

Grand Valley State University

North Carolina A&T State University

Stanford University School of Medicine

Des Moines Public School District

Yeshiva University

Why the new perspective?

- Looking to save time, storage and money
- Application of “conductance”

```
graph LR; A[Pre-Process] --> B[Singular Values of Laplacian Matrix]; B --> C[Time Series]; C --> D[Change Point Detection];
```

Pre-Process

Singular
Values of
Laplacian
Matrix

Time Series

Change Point
Detection

```
graph LR; A[Pre-Process] --> B[Singular Values of Laplacian Matrix]; B --> C[Time Series]; C --> D[Change Point Detection]
```

Pre-Process

Singular
Values of
Laplacian
Matrix

Time Series

Change Point
Detection

**Where did the
data come
from?**

1

Reformat

2

**Isolate Needed
Columns**

3

**Locate Extreme
Outliers**

4

**Impute Missing
Data**

```
graph LR; A[Pre-Process] --> B[Singular Values of Laplacian Matrix]; B --> C[Time Series]; C --> D[Change Point Detection]
```

Pre-Process

Singular
Values of
Laplacian
Matrix

Time Series

Change Point
Detection

Laplacian Matrix

$$\begin{pmatrix} 1 & -1 & 0 \\ -1 & 2 & -1 \\ 0 & -1 & 1 \end{pmatrix}$$

Singular Value of Laplacian Matrix

```
graph LR; A[Pre-Process] --> B[Singular Values of Laplacian Matrix]; B --> C[Time Series]; C --> D[Change Point Detection];
```

Pre-Process

Singular
Values of
Laplacian
Matrix

Time
Series

Change Point
Detection

```
graph LR; A[Pre-Process] --> B[Singular Values of Laplacian Matrix]; B --> C[Time Series]; C --> D[Change Point Detection];
```

Pre-Process

Singular
Values of
Laplacian
Matrix

Time Series

Change
Point
Detection

```
$value  
[1] 79.89921
```

```
$index  
[1] 22 23 24 25
```

What did we find?

- Clear patterns of seasonality
- More avenues to explore

What's next?

- Exploring different methods for computing the eigenvalues of the Laplacian and comparing it to the singular values
- Applying our change point detection algorithms to new data sets, such as the Facebook social network

Take Home Messages

- Accurately and efficiently detecting anomalies in network traffic is essential for effective network management.
- Our approach using singular values of the Laplacian and change point detection has shown promising results and offers a new perspective on this problem.
- We believe that continued research in this area has the potential to greatly improve the automation of network management tasks.

Change Point Detection of Internet Traffic Anomalies via Singular Values of the Laplacian Matrix

Thank you!
